VICTOR MANIGLIA

QA AUTOMATION ENGINEER · PLAYWRIGHT · WEB, API & AI-ASSISTED TESTING

Caracas, Venezuela · Remote · Available in US time zones · English & Spanish (native)
victor.maniglia.dev@gmail.com · linkedin.com/in/victormaniglia · github.com/Annoyingflipper

PROFESSIONAL SUMMARY

QA Automation Engineer and the sole QA on an omnichannel communications SaaS platform. I own the test suite end to end: a Playwright + TypeScript framework in GitHub Actions and Jenkins, REST API testing against Java/Spring Boot services, SQL data checks, JMeter load tests and production root-cause analysis. I use AI tools (Claude Code, Codex, Gemini) every day to write and debug tests faster, and I test AI features too.

300+	65%	80%	400+	20–50
automated tests	less regression time	less test-writing time (AI)	defects found	support cases / week

PROFESSIONAL EXPERIENCE

Automation Engineer | DANAconnect **February 2024 – Present**

Omnichannel communications SaaS (AWS Partner of the Year NOLA 2026) · sole QA alongside 2 developers · hybrid

- Cut regression time by 65% by building and maintaining 300+ Playwright + TypeScript E2E and API tests (Page Object Model, reusable fixtures, test-data setup) that run on every release in GitHub Actions and Jenkins.
- Own quality for every feature and release before production: plan coverage, report defects and release risk, and push test updates through Git pull requests. Built the suite from scratch for a new Conversations module.
- Found the real cause of a delivery degradation that looked like a client sending 10M+ emails: campaign-activation data in SQL showed ~3M, because a campaign had run 2 extra times on empty records. We stopped the duplicate runs before the traffic affected other clients.
- Reduced test-writing and debugging time by 80% with Claude Code, Codex and Gemini, reviewing every AI-generated change; test AI/chatbot features for wrong answers, hallucinations and prompt injection.
- Test REST APIs with Postman and Swagger (payloads, status codes, error handling), run JMeter load tests, and check login, sessions, roles and tenant data isolation; work with Docker and Azure DevOps. Handle 20–50 support cases per week.

QA Engineer | Auronix / DaCodes **January 2023 – February 2024**

- Tested iOS and Android apps, chatbots and integrated flows in client Scrum squads (team of 5 QAs under a QA Lead), designing cases from acceptance criteria with equivalence partitioning and boundary values.
- Automated chatbot regression with Python and Selenium; presented results in client demos. Employee of the Month twice in a row.

TECHNICAL SKILLS

- **AUTOMATION:** Playwright, Selenium, Cypress · TypeScript, JavaScript, Python · Page Object Model, fixtures, test data
- **API, DATA & PERFORMANCE:** REST APIs, Postman, Swagger · PostgreSQL, MySQL, MongoDB, SQL · JMeter
- **CI/CD:** GitHub Actions, Jenkins, GitLab, Azure DevOps · Docker · Git (branches, pull requests)
- **AI-ASSISTED QA:** Claude Code, Codex, Gemini, Perplexity · testing AI/LLM features
- **PROCESS:** risk-based testing, regression, root cause analysis · Jira, Xray, TestRail, PractiTest · Scrum

EDUCATION & COURSES

Computer Engineering | Universidad Simón Bolívar **2019 – 2023**

AWS Cloud Practitioner · Scrum Foundation Professional · Test Automation with Playwright and Python · Selenium · SQL

Also: Co-founder & English teacher, VOS Learning Center (2023 – Present): coaching students and explaining complex topics simply.
